<LOW-REFLECTION COATING WHITE>

ICECLEAR LENS

MASTER OF INVISIBLE AESTHETICS

01 Pure & Transparent, Invisible Aesthetics, Restore Undisturbed True Vision

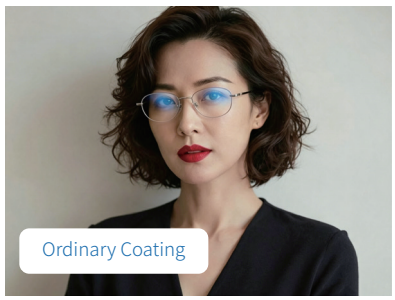

- The nearly colorless coating design keeps lenses purer with no obvious tint after wearing, delivering superior aesthetics.
- High light transmittance brings undisturbed vision and restores real sight.
- Hardened coating provides excellent scratch resistance.
- Compatible with all types of frames, especially ideal for light-colored frames and rimless designs.

02 Low Reflectivity & High Light Transmittance to Achieve "Invisible Lens" Aesthetic Effect with Wear Resistance

Centered on the core concept of pure transparency & low-reflection invisibility, it adopts an almost colorless coating technology. It achieves high light transmittance while greatly reducing the sense of lens presence, perfectly integrating aesthetic design and optical performance.
It delivers transparent vision without stray light, restoring true, clear and undistorted sight, and is especially suitable for scenarios sensitive to visual interference.

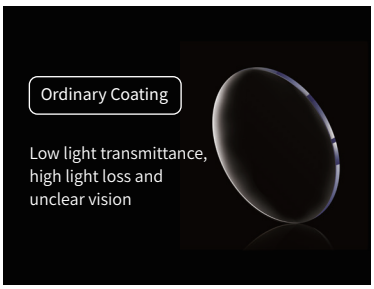

Clear, Transparent & Beauty-enhanced

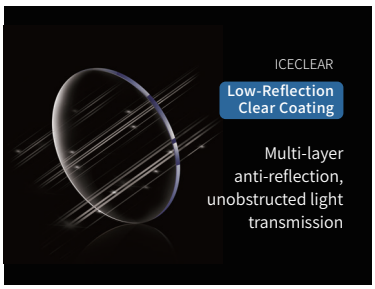

Strong light reflection & blurry imaging

03 Unobstructed light transmission for bright lossless vision

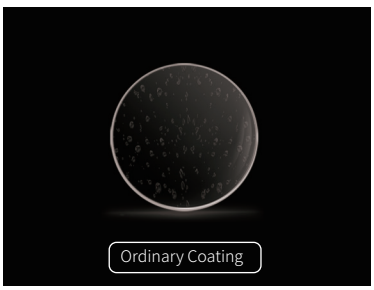

Greatly reduce light loss and deliver bright transparent vision.

04 Anti-fouling & easy to clean

- The surface is smooth and non-sticky.
- Water droplets bead up, oil stains are easy to wipe off, keeping lenses clean and transparent for a long time.

05 Basic Parameters

Color	White
Easy to Clean	✓
Color Restoration	✓
Anti-reflection	✓
UV Protection	✓
Wear Reinforcement	✓
Anti-static	✓
Safe Driving	✓
Aesthetics	✓
